Suren Mouchsiadis

Senior Software / Platform / Cloud Engineer

Munich, Germany | smouchsiadis@gmail.com | +49 157 39714002 | LinkedIn | mouchsiadis-solutions.com

Professional Summary

Senior Software, Platform, Cloud Engineer with 8+ years of experience delivering complex products and platform initiatives across healthcare, legal tech, mobility, analytics, and enterprise software. Strong track record of end-to-end ownership, legacy modernization, cloud and platform responsibility, and technical leadership, including systems serving 10,000+ users. Experienced in taking ambiguous technical problems from architecture and planning through production while collaborating across teams and mentoring engineers.

Technical Skills

Languages: TypeScript, JavaScript, C#, Java, Python, Ruby, SQL, PHP
Backend: Node.js, NestJS, .NET, Spring, Ruby on Rails, Flask, REST APIs, GraphQL, Prisma, TypeORM, Hibernate
Frontend: Angular, React, Next.js, Vue.js, HTML/CSS, component architecture, state management, responsive applications
Cloud & Platform: AWS, Microsoft Azure, GCP, AWS CDK, Terraform, Docker, Kubernetes, serverless, IAM, networking, CI/CD, monitoring, observability
Data: PostgreSQL, MySQL, MongoDB, Redis, analytics/data processing, web scraping, data visualization
Quality & AI: Playwright, Cypress, Jest, unit/integration/E2E testing, test strategy, AI agents, LLM/AI tooling integration
Domains: Healthcare and clinical research, LegalTech, energy/gas markets, industrial IoT, mobility/fleet operations, fintech, construction SaaS, e-commerce analytics

Professional Experience

Senior Software Engineer **Oct 2026 – Present**
Alexander Thamm GmbH *Munich, Germany*
Data and AI consultancy delivering data strategy, AI, and software engineering projects for enterprise and mid-sized clients across the DACH region.

- Delivering software engineering for client data and AI initiatives, from technical design through implementation and production readiness.

Senior Cloud Engineer **Apr 2026 – Sep 2026**
Ocumeda GmbH *Munich, Germany*
Teleophthalmology platform connecting optical retail locations with ophthalmology specialists for digital eye-screening workflows.

- Owned the AWS cloud platform behind security-sensitive teleophthalmology workflows, covering environment provisioning, scalability, reliability, IAM, networking, and operational infrastructure.
- Evolved infrastructure as code with AWS CDK and improved repeatable environment provisioning and deployment practices across the platform.
- Owned DevOps and CI/CD topics and coordinated infrastructure delivery with an external engineering team, providing architectural guidance and unblocking cross-team delivery.
- Improved production operations through monitoring, observability, deployment-process improvements, and reliability-focused engineering across cloud and application boundaries.
- Built and evaluated custom AI agents and AI-assisted engineering tooling while contributing across AWS, TypeScript, NestJS, React, Nx, and Playwright.

Software Engineer **Jan 2025 – Mar 2026**
JUNE GmbH *Munich, Germany*
AI-driven legal case-management and workflow-automation platform for complex and high-volume legal work, including documents, deadlines, communications, and reporting.

- Built end-to-end product features across C#, .NET, TypeScript, and Angular for legal case management, document workflows, deadlines, communications, and business analytics.
- Developed analytics functionality spanning backend APIs, domain/business logic, data processing, and frontend visualization of operational and business metrics.
- Modernized a legacy Angular application by migrating 50+ components away from deprecated UI dependencies to the current Angular version and component library.
- Managed infrastructure as code with Terraform and Microsoft Azure and contributed to CI/CD, monitoring, observability, testing, and production reliability.
- Mentored 2 junior developers through implementation design, debugging, code reviews, and full-stack engineering practices.

Senior Software / Platform Engineer - Freelance **Feb 2021 – Jan 2026**

Toptal, Upwork & direct client engagements *Remote / Munich, Germany*

Selected engagements across healthcare, fintech, industrial software, analytics, e-commerce, data products, and SaaS.

- Delivered full product and platform work from discovery and technical design through implementation, automated testing, CI/CD, deployment, and production support.

Acclinate Inc. - Senior Full-stack / Platform Engineer **2022 – 2023**

Clinical research and health-equity data | NestJS, Angular, TypeORM, PostgreSQL, Auth0, GCP

- Led development of core platform capabilities for healthcare analytics, data processing, and operational workflows in a company focused on improving representation and engagement in clinical research.
- Delivered authenticated full-stack features from requirements and technical design through production using NestJS, Angular, TypeORM, PostgreSQL, Auth0, and GCP.
- Mentored 2 engineers through code reviews, frontend architecture, state management, authentication, and implementation guidance.

Tanzer Holdings Limited - Senior Node.js Developer **2024**

Custodial financial services | Node.js, TypeScript, Passport.js, IBEX, Lightspark, Railway

- Developed production backend functionality for a custodial financial-services product, including authentication, service orchestration, and integration-heavy payment flows.
- Implemented and maintained Passport.js authentication plus integrations with IBEX and Lightspark services, and supported deployment/CI workflows on Railway.

Exceed Solutions GmbH - Full-stack Developer **2023 – 2024**

E-commerce visitor recovery and conversion | Node.js, JavaScript, MongoDB, Kubernetes, GCP, CI/CD

- Built core visitor-identification and recovery tooling for software designed to recover otherwise lost web traffic and improve e-commerce conversion.
- Designed and implemented a domain-specific language for configurable client-side traffic rules and business logic.
- Improved recovery and exit-page experiences and delivered backend/frontend functionality across Node.js, MongoDB, Kubernetes, GCP, and CI/CD workflows.

Wallabit Media LLC / Bitbo - Web Developer **2024**

Bitcoin analytics and data visualization | Jekyll, Vue.js, JavaScript, Python, Ruby, Stripe, Formspree

- Built and maintained Bitcoin market-data and analytics experiences for Bitbo, including interactive charts and data visualizations.
- Refactored Python and Ruby code and delivered Jekyll/Vue/Webflow functionality plus Stripe and Formspree integrations.

Ota - Scraping Expert **2023**

Travel data | Python, SQL, web scraping, Google Places API, NoSQL

- Developed robust scrapers for multiple travel agencies and normalized external travel/location data for downstream product use.
- Contributed to architecture for future application capabilities and oversaw recurring data-collection and maintenance workflows.

elunic AG - Lead QA Engineer / Full-stack Developer **2021 – 2022**

Industrial IoT and connected manufacturing | Angular, TypeScript, Node.js, Cypress, Jest, Redis, Docker, Kubernetes

- Built automated quality coverage for industrial/connected-software products, implementing E2E testing and supporting full-stack feature delivery.
- Established testing workflows with Cypress/Jest and CI/CD integration across an Angular/Node.js application stack.
- Coordinated execution by delegating tasks and tracking delivery against story points and project-budget constraints.

Variant Perception - Full-stack Developer **2021**

Quantitative macro and investment research | React, Node.js, Express, AWS Serverless

- Delivered full-stack functionality for a quantitative investment-research product focused on macro cycles, market signals, and repeatable research workflows.
- Built React/Node.js application features and AWS Serverless components across implementation, testing, and deployment.

RemoteAmbition - Full-stack Developer **2021**

Job-search platform | React, TypeScript, Node.js, MySQL, GraphQL, Twilio

- Built frontend and backend functionality for a job-search platform, including application-facing workflows, database/API logic, and messaging capabilities.
- Delivered React/TypeScript UI features and Node.js/MySQL/GraphQL services with Twilio integration.

BizMiner Research Guides - Front-end Developer **2021**

Industry financial and market analytics | Vue.js, Vuex, JavaScript, CSS, Figma

- Developed frontend functionality for a business-research platform providing granular industry financial, market, and valuation data.
- Translated Figma designs into Vue/Vuex features, integrated endpoints, and implemented lower-level JavaScript/CSS behavior where needed.

Software Engineer **Aug 2023 – Jan 2025**

Ingenics Digital GmbH *Munich, Germany*

e-Gas: modular, multi-tenant software for regulated commercial workflows of gas network operators, storage operators, and traders.

- Led a 2-developer team to reverse-engineer and modernize e-Gas, a legacy monolith supporting regulated gas-market processes and communication with market participants.
- Rebuilt backend functionality with Java and Spring, introducing a modern service layer and cleaner data-access patterns while preserving complex domain behavior.
- Architected and developed the React/TypeScript frontend, defining component structure, state-management patterns, and maintainable application boundaries.
- Worked within a domain involving nomination/capacity workflows, master and contract data, monitoring, deadlines, and integration-heavy gas-market processes.

Technical Consultant / Full-stack Developer **Dec 2022 – Jul 2023**

BOLDLY GO INDUSTRIES GmbH *Munich, Germany*

Technology and innovation consultancy focused on digital transformation, Industry 4.0, data-driven products, and industrial software.

- Consulted on technical architecture and delivered custom client software, including a conveyor-line management system for industrial operations.
- Built Angular/TypeScript frontends and backend APIs/business logic with C#/.NET and PHP/Laravel from client requirements through database integration.
- Worked across consulting and implementation, translating business/process requirements into maintainable software components and user workflows.

Software Developer **Jan 2022 – Dec 2022**

BITS GmbH *Munich, Germany*

PRISMA digital breast-cancer aftercare project: patient portal/mobile workflows with questionnaire-based monitoring and escalation to breast centers.

- Led development of PRISMA, a multi-clinic patient-monitoring platform processing questionnaire data for 10,000+ breast-cancer patients across participating medical facilities.
- Designed the relational database and backend data model and implemented notification logic that alerted physicians/breast centers when repeated patient responses indicated potential concerns.
- Built the Angular/TypeScript frontend and Java/Spring/MySQL/Hibernate backend while mentoring 2 junior developers and providing technical guidance.

Software Engineer Intern **Mar 2021 – Aug 2021**

BMW Group *Munich, Germany*

Internal engineering tooling for vehicle/engine testing, measurement-data processing, and calibration analysis.

- Developed calibration and data-analysis software for engine test vehicles, helping engineers navigate and interpret large volumes of vehicle sensor and measurement data.
- Built a Vue.js/JavaScript visualization interface for real-time sensor monitoring and historical analysis.
- Implemented Python/Flask data-processing workflows using pandas and asammdf and created interactive Plotly visualizations for engineering measurement files.

Working Student Software Developer **Oct 2020 – Mar 2021**

Capmo *Munich, Germany*

Construction project-management platform for general contractors, covering site documentation, defects, plans/documents, tasks, and project coordination.

- Developed React/TypeScript/GraphQL business logic within a construction-management platform used to coordinate project and site workflows.
- Established a Cypress E2E suite using the Page Object Model for critical workflows and regression protection.
- Diagnosed and resolved frontend performance issues, UI inconsistencies, and application/backend logic defects.

Working Student Software Developer **May 2020 – Oct 2020**
metoda GmbH *Munich, Germany*

E-commerce and Amazon intelligence with proprietary analytics, price/product monitoring, and crawling technology.

- Built internal Vue.js/Quasar/Plotly analytics dashboards for e-commerce market and competitive-data analysis.
- Developed Ruby on Rails/Docker backend services and API endpoints for data processing and internal product workflows.
- Implemented Selenium/Ruby scraping pipelines to collect competitor, product, and market data used in analytics and monitoring.

Working Student - Second Level Support **Jan 2020 – May 2020**
iPrax Systems GmbH *Munich, Germany*

Practice-management software for physiotherapy, occupational therapy, speech therapy, podiatry, and alternative-practitioner workflows, including patients, appointments, prescriptions, and billing.

- Investigated and resolved application bugs and database conflicts using SQL in Windows Server environments for customer-facing practice-management software.
- Generated client reports and business analyses with SQL and Excel and supported software testing and issue reproduction.
- Documented defects in Jira and collaborated with the development team to diagnose root causes and validate fixes.

Lead Developer **Jan 2018 – Mar 2021**
NEO TAXI *Tbilisi, Georgia*

Official Yandex taxi-fleet partner in Georgia with driver onboarding, fleet operations, support, and payment/operational workflows.

- Led development of a Yandex Fleet-integrated driver and fleet-management platform supporting 10,000+ active drivers.
- Built Angular/TypeScript operator and driver workflows plus NestJS/Prisma/PostgreSQL APIs for registration, onboarding, fleet operations, and automation.
- Implemented real-time driver communication with Telegram Bot API and Bird.com SMS and owned architecture, integrations, production support, and operational tooling.
- Automated workflows that reduced manual fleet-administration effort across driver registration, status management, and recurring operational processes.

Selected Product Work

YPay - Fleet & Payment Management Platform | ypay.ge

- Designed and built an end-to-end multi-tenant platform for taxi-fleet operations and driver payments, including administration, driver onboarding/confirmation, payment integrations, SMS/OTP communication, and operational automation.
- Owned product architecture across backend, frontend, infrastructure, third-party integrations, and mobile workflows using NestJS, Prisma, PostgreSQL, TypeScript, and production cloud infrastructure.
- Implemented secure handling of tenant-specific integration credentials and operational workflows around fleet/payment providers.

YDesk - Internal Customer Support Platform | ydesk.org

- Built a purpose-specific support and ticketing platform for fleet operations as a lightweight Zendesk alternative tailored to internal driver-support workflows.
- Took the product from concept through architecture and implementation, emphasizing fast operator workflows, maintainability, and integration with surrounding business systems.

NeoPoints - Driver Loyalty Platform | neopoints.ge

- Designed and launched a multi-tenant loyalty platform for Neo Taxi and Neo Delivery drivers, with separate hosts, memberships, wallets, and activation per fleet park.
- Built an append-only, balanced points ledger that rewards qualifying completed orders, plus a gift catalogue with stock reservations, ranks, missions, seasons, leaderboards, order tournaments, and audited admin adjustments.
- Integrated YPay identity/SMS OTP and challenge rewards through HMAC-signed internal APIs and a shared Yandex Fleet service; shipped as an installable Georgian/English/Russian PWA on Next.js, React, TypeScript, PostgreSQL, Docker, and Caddy.

Education

Technical University of Munich (TUM) 2019 – 2022
Computer Science, B.Sc. program studies Munich, Germany

Studienkolleg bei den Universitäten des Freistaates Bayern in München 2019
T-Kurs - Mathematics, Physics, Chemistry, Computer Science, German Munich, Germany
